
Full-Stack Developer

My first paid exposure to development was working under a software engineer for Cisco, the experience was invaluable.

I knew my interest in the field was real when I developed a storyboard app to propose to my wife, and was successful.

For 3 years my work was half graphic design and web development. You can find my work in Canadian Jewellers and Business Jewellers magazines, Las Vegas jewelry tradeshow, Hong Kong jewelry tradeshow, for websites please see below.

At this point in my developer journey I am enjoying my exposure to Javascript and frameworks like Angular and React as a full stack tool.

I'm enthralled with it's ability to have control over and influence the user experience. Looking for opportunities to grow in these modern stacks and strengthen my backend abilities.

Skills

Frontend

JavaScript* , Angular, React, JQuery,HTML, CSS, SASS, Bootstrap

Backend

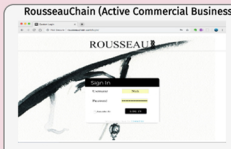
Node, Express, Firebase, ~Mongo, ~Postgres, ~Knex ,~SQLite ,PHP, ~Python

CMS & SDK & Misc

Ionic, Corona SDK, LUA, Wordpress, ~Blogging, ~SEO, Graphic Design, Adobe XD, Adobe Photoshop, Adobe Illustrator, Adobe Indesign

Project Highlights

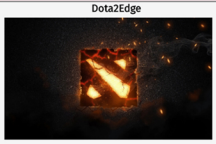
RousseauChain (Active Commercial Business)



A ecommerce Wordpress site for RousseauChain ltd. It's an active site with customers. In addition to the standard e-commerce site I developed a quick order form that enables the customer to add many items to cart by using only the keyboard, and it has a relationship to an offline database. On top of that there's a visual catalog experience.

Role: Main Developer and Designer
Wordpress PHP Javascript JQuery HTML CSS Woo-commerce 3rd-party-integrations

Dota2Edge



Dota 2 is a game, in a way similar to chess. It gives you a short period of time to pick "heroes" that counter the opposing team and synergize with your team. This app tracks that process every step of the way in realtime the secret algorithm calculates the best hero to choose so you're always at an advantage. Included is a backend that enables the admins to update the data with a form and a point a click graph for relationships.

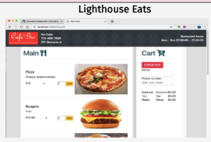
Role: Everything
Firebase Angular JavaScript HTML CSS Bootstrap

Creative Project Management Board (Needs updated IMG)

To-be-announced

Role: All Angular Web App and Firebase, little React Native
In Progress

Lighthouse Eats



An app similar to SkipTheDishes or other food delivery apps. It has route guards and basic authentication enabling user-stories. A customer logged in can visit all the restaurants available in a long index list. On clicking a store they are presented with a menu and cart, after checking out there's an estimated wait time. After an order has been processed, a logged in store owner can visit his restaurants backend and manage the order in an interactive way.

Role: Entire backend and some frontend*
Node Express Postgres Knex JavaScript 3rd-party-API JQuery

booksftw.com

A stackoverflow Q & A site to answer questions for the company, so I don't have to repeat myself.

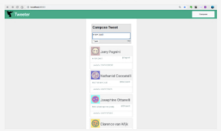
Role: Everything
Wordpress PHP Custom Fields Plugin Theme development

TinyApp

A bitly like site that shortens urls and basic analytics.

Role: Everything
Node Express JQuery JavaScript CSS EJS

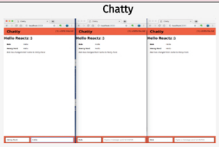
Tweeter



A twitter-like site for posting your latest updates.

Role: Everything
Node Express EJS CSS JavaScript JQuery

Chatty



A realtime chatroom app that's powered by websockets.

Role: Everything
React Websockets JavaScript CSS
